

## 1 What ReKey is, and what changes for you

ReKey is the system ReMarkt uses to convert laptop keyboards to the language a customer ordered. Until now you received the daily print list by e-mail and reported back by e-mail. Both now live in ReKey: the list arrives by itself, you tick it off, and ReMarkt sees the result immediately. Nothing else about your work changes.

You have four screens, listed down the left-hand side:

| SCREEN                | WHAT IT IS FOR                                                                 |
|-----------------------|--------------------------------------------------------------------------------|
| <b>Print runs</b>     | The two daily lists from ReMarkt's order system. This is the bulk of the work. |
| <b>Print requests</b> | Extra sheets the floor asks for outside those runs.                            |
| <b>History</b>        | Everything you have handled, searchable.                                       |
| <b>Stock</b>          | What is left in ReMarkt's sheet cabinet, so you know what to resupply.         |

### Signing in

1. Open the address above and choose **Noviply**.
2. Enter the four-digit code you were given.
3. The first time, you are asked to choose your own code. Do that — the code you were given was sent by message and should not stay in use.

**Four wrong codes in a row** locks the account for fifteen minutes. If you are locked out or have forgotten your code, ask ReMarkt to reset it.

### The screen keeps itself up to date

You never have to reload. As long as the tab is open, ReKey checks for new work every twenty seconds, and the line at the bottom of the screen tells you when it last looked. Come back to the tab after a while and it refreshes straight away.

## 2 Print runs — the two daily lists

Twice a day ReMarkt's order system produces a list of the sheets to print: the **morning run** and the **afternoon run**, the second one around 12:30. That list is now sent straight into ReKey. No mail, nothing to load.

NEW PRINT RUN

Afternoon run · 1 Aug

2 lines to print · 4 sheets

Sent by Ordersysteem · 11:34

2 more new runs are waiting as well.

Open the run

Later

When a run arrives you get this, whichever screen you are on.  
**Open the run** takes you straight to it; **Later** puts it away and leaves a mark next to *Print runs* in the menu. It appears once per run, never twice.

Working through a run

1. **To do** and **Completed** are the two tabs. You work in *To do*; a run moves to *Completed* by itself once every line is handled.
2. Below them are the runs themselves, oldest first — so the morning run comes before the afternoon run.
3. Press **Printed** per line, or **All ... printed** when the whole run is done in one go.
4. If a line cannot be printed, press **Cannot print** and say why. The floor sees your reason and can act on it.
5. **Download for Excel** gives you the same list back with the current state in it, for your own administration.

Print runs

The order system sends its list twice a day and it appears here by itself — no mail, nothing to load. Use "Add a run" only if a list has to be added by hand.

Remove from list

| # | MODEL               | LANGUAGE  | ENTER | SHEETS | ORDER NUMBER | ACTION  |              |
|---|---------------------|-----------|-------|--------|--------------|---------|--------------|
| 1 | HP ProBook 430 G7   | AZERTY BE | E1    | 1x     | 6000016965   | Printed | Cannot print |
| 2 | Dell Latitude 7330  | AZERTY BE | E1    | 1x     | 6000016967   | Printed | Cannot print |
| 3 | Dell Latitude 5320  | QWERTY ES | E1    | 2x     | 5000003967   | Printed | Cannot print |
| 4 | HP ProBook 440 G5   | AZERTY FR | E1    | 1x     | 4000009863   | Printed | Cannot print |
| 5 | Lenovo ThinkPad X13 | QWERTZ DE | E2    | 1x     | 6000017010   | Printed | Cannot print |

The morning run of 1 August: five lines, six sheets, nothing ticked off yet. **Sheets** is the number of sheets for that order — usually one, but an order can hold several laptops.

TO DO

7

lines waiting to be printed

SHEETS TODAY

10

across the runs still open

PRINTED

0

lines ticked off in these runs

The three figures above the list count the runs that are still open, not the extra requests.

**The same run arriving twice does no harm.** ReKey recognises a list it has already had and keeps the run you have, exactly as you left it. It never creates a second one and never overwrites what you ticked off.

### A run that should not be there

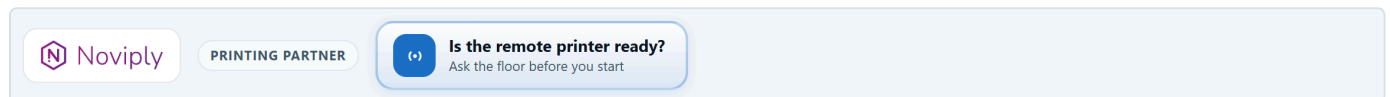

**Remove from list** takes a run out of the list. That works even when lines are still open — a test run, or a list the order system sent twice. You are told how many lines were never printed before it goes. Anything you already ticked off stays in the history; lines that were never handled do not appear there.

### Adding a list by hand

**Add a run** is still there for the exception: the order system is down, or a list has to be added afterwards. It takes the same file as before ( `.xlsx` `.xlsm` `.csv` ), named batch-1-... or batch-2-...

## 3 The remote printer

The printer for the three-star premium stickers stands at ReMarkt and you operate it from a distance. You cannot see whether it is switched on and loaded — only the floor can. So ask them, with the button next to your logo. It is on every screen, because the question comes up whether you are working through a run or an extra request.

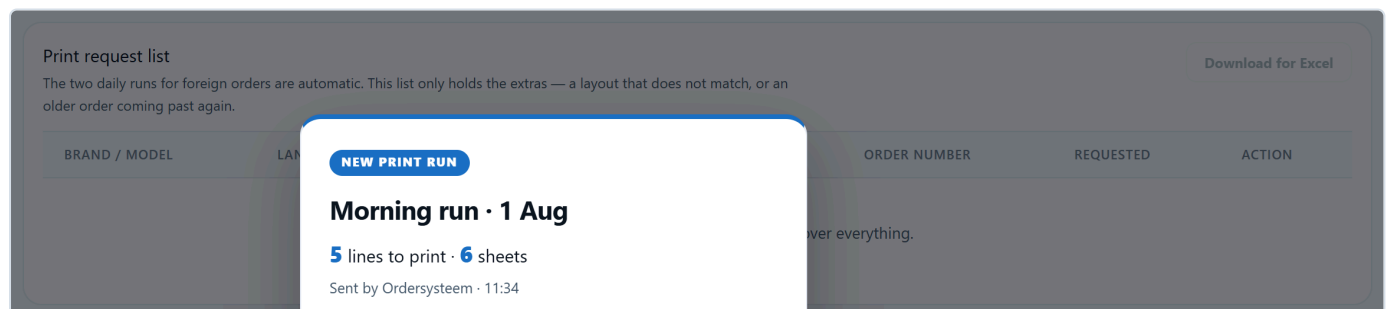

Press it and the floor gets the question straight away. The button then says *Waiting for the floor...*, and turns green with **We are printing now** once they confirm. Press that when you start, so nobody touches the printer while it runs.

## 4 Print requests — the extras

Sometimes the floor needs a sheet that is not in a run: a language that does not match, an older order coming past again, or a model the keyboard printer cannot handle. Those land here, one by one, as they are asked for.

Handle them the same way: **Printed**, or **Cannot print** with a reason. **Download for Excel** gives you the whole list, handled and open.

**Enter** is the shape of the Enter key — see the reference on the last page. **Requested** shows how long it has been waiting.

## 5 History — and finding one order back

Everything you tick off stays in the history: both the run lines and the extra requests, in one list, with the time and who handled it. The **Where from** column says whether a line came from a run or was an extra request.

Use the search box to find one order back. It looks at order number, model, language, run and outcome at the same time. Several words all have to match, so *latitude printed* finds printed Latitudes and not everything with either word.

History

Everything ticked off — the extra requests and the daily runs, in one list with the time.

Order number, model, language, batc

1 of 1 lines · 1 sheets · 0 could not be printed

| BRAND / MODEL           | LANGUAGE       | SHEETS | ORDER NUMBER | WHERE FROM             | OUTCOME   | HANDLED      |
|-------------------------|----------------|--------|--------------|------------------------|-----------|--------------|
| HP<br>HP ProBook 450 G8 | QWERTY IT · E1 | 1×     | 5000004100   | Afternoon run · 31 Jul | ✓ Printed | 01-08, 11:37 |

The history. Clear the box to see everything again.

## 6 Stock — what is left in the cabinet

ReMarkt keeps pre-printed sheets in a cabinet of numbered folders. This screen shows the whole cabinet, emptiest first, so you can see what needs resupplying.

Stock

The whole cabinet, emptiest first. Minimum levels come later: they follow measured usage, and that takes 0 of 14 days so far.

Download for Excel

| FOLDER                            | LAYOUT       | STOCK      |
|-----------------------------------|--------------|------------|
| No. 38<br>Dell Latitude 3310      | QWERTY US NL | 0<br>empty |
| No. 112<br>Fujitsu Lifebook U7410 | QWERTY US NL | 0<br>empty |
| No. 118<br>HP Probook 430 G8      | QWERTY US NL | 0<br>empty |
| No. 131<br>Fujitsu Lifebook E5410 | QWERTY US NL | 0<br>empty |

NEW PRINT RUN

Morning run · 1 Aug

5 lines to print · 6 sheets

Sent by Ordersysteem · 11:34

1 more new run is waiting as well.

Open the run

Later

The cabinet, emptiest first. **Download for Excel** gives you the same list as a file.

## 7 Reference

### The four methods

| LEVEL | METHOD                                                                                                      |
|-------|-------------------------------------------------------------------------------------------------------------|
| ★     | <b>Basic stickers</b><br>Loose keys, only with a team leader's approval.                                    |
| ★★    | <b>Stock sheet</b><br>A pre-printed sheet from the cabinet.                                                 |
| ★★★   | <b>Premium sticker</b><br>Stronger sheet, printed by you. This is what the runs and the requests are about. |
| ★★★★  | <b>Keyboard print</b><br>Ink straight onto the keyboard, no sticker.<br>Handled by Notebook Service.        |

### Enter key: E1 and E2

The shape of the Enter key decides which sheet fits. It is part of the article number, for example NB10172**E1**NL.

| CODE | SHAPE                                 |
|------|---------------------------------------|
| E1   | Large Enter, inverted L over two rows |
| E2   | Small, rectangular Enter on one row   |

### Language codes in the run

NL Dutch · BE Belgian · DE German · ES Spanish · IT Italian · FR French · PT Portuguese · US / UK English · SE, FI, NO, DK Nordic · PL Polish. A code ReKey does not recognise is never refused — the line stays in the run and is flagged at the top so someone can look at it.

## Colours, so you can read the screen at a glance

| COLOUR | MEANS                                                            |
|--------|------------------------------------------------------------------|
| Blue   | Something you send or open yourself.                             |
| Amber  | Something is waiting for you: a new run, an unanswered question. |
| Green  | Done. Printed, ticked off, confirmed.                            |
| Red    | Cannot be done, with a reason attached.                          |

## Two habits worth keeping

- **Tick off as you go.** The floor sets laptops aside waiting for your sheets; the moment you mark a line printed, they can pick it up.
- **Always give a reason with “Cannot print”.** That reason is the only thing the floor has to work with, and it is what stops the same order coming back.

## Something wrong, or a question?

Contact ReMarkt. Everything you do is recorded with a time and a name, so a line can always be traced back — nothing is lost if something goes wrong halfway.
