

1 What KeyFlow is, and what changes for you

KeyFlow is the system ReMarkt uses to convert laptop keyboards to the language a customer ordered. Until now you received the daily print list by e-mail and reported back by e-mail. From now on both live in KeyFlow: you see the list, you tick it off, and ReMarkt sees the result immediately. Nothing else about your work changes.

You have three screens, listed down the left-hand side:

SCREEN	WHAT IT IS FOR
Print runs	The two daily lists from ReMarkt's order system. This is the bulk of the work.
Print requests	Extra sheets the floor asks for outside those runs, plus the remote printer.
Stock	What is left in ReMarkt's sheet cabinet, so you know what to resupply.

Signing in

1. Open the address above and choose **Noviply**.
2. Enter the four-digit code you were given.
3. The first time, you are asked to choose your own code. Do that — the code you were given was sent by message and should not stay in use.

Four wrong codes in a row locks the account for fifteen minutes. If you are locked out or have forgotten your code, ask ReMarkt to reset it.

2 Print runs — the two daily lists

Twice a day ReMarkt's order system produces a list of the sheets to print: **batch 1** in the morning and **batch 2** around 12:30. That file (`.xlsx` `.xlsm` `.csv`) is loaded into KeyFlow instead of e-mailed. Either ReMarkt or you can load it — whoever gets there first.

1. **Add a run** — choose the file. KeyFlow reads the date and the batch number from it and shows the lines.
2. **Print the sheets** as you always have.
3. **Tick off**. Press **Printed** per line, or use **All ... printed** when the whole run is done in one go.
4. If a line cannot be printed, press **Cannot print** and say why. The floor sees your reason and can act on it.
5. **Download for Excel** gives you the same list back with the current state in it, for your own administration.

Print runs

The list from the order system, twice a day. Drop the file here and it sits next to the extra requests — no more mail.

Add a run

Batch 2 · 30-07 •

11 sheets · 10 lines · 7 still open

Loaded 30-07, 15:00 by Tim Beek · batch-2-30-07-2026.csv

Download for Excel

All 7 printed

#	MODEL	LANGUAGE	ENTER	SHEETS	ORDER NUMBER	ACTION
1	HP ProBook 440 G9	AZERTY BE	E1	1×	000100011	✓ Printed
2	Lenovo ThinkPad L14	AZERTY BE	E1	1×	000100012	✓ Printed
3	HP EliteBook 840 G7	QWERTY ES	E1	1×	000100013	✓ Printed

Print runs — batch 2 of 30 July. The first three lines are ticked off; twelve are still open. **Sheets** is the number of sheets for that order: usually one, but an order can hold several laptops.

Loading the same run twice does no harm. KeyFlow recognises the date and batch number and keeps the run you already have — it never creates a second one and never overwrites what you ticked off.

A run that is finished

As soon as every line is handled, the run moves out of the way into **Completed runs**, which you can fold open at any time. The tab then invites you to add the next run. Nothing is deleted: every line stays in the history.

When a new run arrives

You get an amber bar at the top of your screen and a dot next to **Print runs** in the menu. It disappears once you open the run. There is no pop-up — it will never interrupt what you are doing.

NEW New print run: Batch 2 · 30-07
11 sheets waiting to be printed

The notice for a new run. Amber always means: something is waiting for you.

3 Print requests — the extras

Sometimes the floor needs a sheet that is not in a run: a language that does not match, an older order coming past again, or a model the keyboard printer cannot handle. Those land here, one by one, as they are asked for.

Handle them the same way: **Printed**, or **Cannot print** with a reason. **Download for Excel** gives you the whole list, handled and open.

Print request list

The two daily runs for foreign orders are automatic. This list only holds the extras — a layout that does not match, or an older order coming past again.

Download for Excel

BRAND / MODEL	LANGUAGE	ENTER	SHEETS	ORDER NUMBER	REQUESTED	ACTION	
Dell Dell Latitude 7390	QWERTZ DE	E1	1×	000100031	30-07, 15:00 Not ready during the run.	Printed	Cannot print
HP HP EliteBook 840 G8	QWERTY IT	E2	2×	000100032	30-07, 15:00 Keyboard printer cannot handle this model.	Printed	Cannot print

Two extra requests. **Enter** is the shape of the Enter key — see the reference on the last page. **Requested** shows how long it has been waiting.

The remote printer

The printer for the three-star premium stickers stands at ReMarkt and you operate it from a distance. You cannot see whether it is switched on and loaded — only the floor can. So ask them:

1. Press **Send** on *Ask the floor if the printer is ready*.
2. They get the question on their screen and answer ✓ **ready** or ✗ **not yet**, with a reason.
3. When you start printing, press **We are printing now**. The floor sees a blinking marker for five minutes, so nobody touches the printer while it runs.

Remote printer

The printer sits at ReMarkt. Only the floor can see whether it is loaded and switched on.

Ask the floor if the printer is ready

They get a message straight away

Send

The remote printer. Blue is always something you send; amber is something waiting for you.

4 Stock — what is left in the cabinet

ReMarkt keeps pre-printed sheets in a cabinet of numbered folders. This screen shows the whole cabinet, emptiest first, so you can see what needs resupplying.

A minimum per folder is not shown yet: KeyFlow works it out from measured use, and that needs fourteen days of real work. Until then you see the plain counts. After that, folders below their minimum are flagged and the screen is called *Stock running low*.

Stock

The whole cabinet, emptiest first. Minimum levels come later: they follow measured usage, and that takes 1 of 14 days so far.

Download for Excel

FOLDER	PART NUMBER	LAYOUT	STOCK
No. 112 Fujitsu Lifebook U7410	NB10210E1NL	QWERTY US NL	0 empty
No. 118 HP Probook 430 G8	NB10204E1NL	QWERTY US NL	0 empty
No. 131 Fujitsu Lifebook E5410	NB10209E1NL	QWERTY US NL	0 empty

The cabinet, emptiest first. **Download for Excel** gives you the same list as a file.

5 History — and finding one order back

Everything you tick off stays in the history: both the run lines and the extra requests, in one list, with the time and who handled it. The **Where from** column says whether a line came from a run or was an extra request.

Use the search box to find one order back. It looks at order number, model, language, batch and outcome at the same time. Several words all have to match, so *latitude printed* finds printed Latitudes and not everything with either word.

History

Everything ticked off — the extra requests and the daily runs, in one list with the time.

batch 2

3 of 4 lines · 3 sheets · 0 could not be printed

BRAND / MODEL	LANGUAGE	SHEETS	ORDER NUMBER	WHERE FROM	OUTCOME	HANDLED
HP HP ProBook 440 G9	AZERTY BE · E1	1×	000100011	Batch 2 · 30-07	✓ Printed	30-07, 15:00
Lenovo Lenovo ThinkPad L14	AZERTY BE · E1	1×	000100012	Batch 2 · 30-07	✓ Printed	30-07, 15:00
HP HP EliteBook 840 G7	QWERTY ES · E1	1×	000100013	Batch 2 · 30-07	✓ Printed	30-07, 15:00

Shared with everyone · updated 30-07, 15:01

The history, filtered on “batch 2”. Clear the box to see everything again.

6 Reference

The four methods

LEVEL	METHOD
★	Basic stickers Loose keys, only with a team leader's approval.
★★	Stock sheet A pre-printed sheet from the cabinet.
★★★	Premium sticker Stronger sheet, printed by you. This is what the runs and the requests are about.
★★★★	Keyboard print Printed directly onto the keyboard by Notebook Service.

Enter key: E1 and E2

The shape of the Enter key decides which sheet fits. It is part of the article number, for example NB10172**E1**NL.

CODE	SHAPE
E1	Large Enter, inverted L over two rows
E2	Small, rectangular Enter on one row

Language codes in the run file

NL Dutch · BE Belgian · DE German · ES Spanish · IT Italian · FR French · PT Portuguese · US / UK English · SE, FI, NO, DK Nordic · PL Polish. A code KeyFlow does not recognise is never refused — the line stays in the run and is flagged at the top so someone can look at it.

Colours, so you can read the screen at a glance

COLOUR	MEANS
Blue	Something you send or open yourself.
Amber	Something is waiting for you: a new run, an unanswered question.
Green	Done. Printed, ticked off, confirmed.
Red	Cannot be done, with a reason attached.

Two habits worth keeping

- **Tick off as you go.** The floor sets laptops aside waiting for your sheets; the moment you mark a line printed, they can pick it up.
- **Always give a reason with “Cannot print”.** That reason is the only thing the floor has to work with, and it is what stops the same order coming back.

Something wrong, or a question?

Contact ReMarkt. Everything you do is recorded with a time and a name, so a line can always be traced back — nothing is lost if something goes wrong halfway.
